The Official Journal of the Capital Area Timex/Sinclair Users Group

PRESIDENTIAL RAMBLINGS

FEBRUARY PROGRAM NOTES

The message from the CATS executive suite has not changed for the last two months: **WE NEED A REPLACEMENT PRESIDENT!!**

Ideally, we should be rescued by a Ronald Reagan-grandfather type figure who would ride into town, mesmerize the populace, triple defense spending, quadruple our membership, and elevate Clive Sinclair to sainthood.

All this before riding off into the Western sunset where honoraria truly flourish for ex-CATS presidents.

Short of this, we need to find our own home-grown Ronald Regan look-alike to be the central point of contact for the group's various activities.

The term of office can be either four or 16 months (until June 30, 1990 or June 30, 1991).

No experience is necessary.

No technical qualifications are necessary.

The ten-person Executive Committee exists for help with the tough decisions.

TED OSHEROFF, head of the

Executive Search Committee, has contacted almost every single member of the group in the past two months. We need to give him positive help now by volunteering names (including our own) so he can wrap-up this difficult chore. His phone number is:
(Metro) 459-6111.

We are not looking to saddle any one individual with an impossible burden. But this job is not a killer. The actual time absorbed can be quite minimal.

Unless this problem of leadership is resolved soon, we may have to begin thinking about disbanding CATS.

I will not be at the February 10th meeting because I will be doing volunteer work at a local high school science fair.

MARK FISHER will conduct the Executive Committee and General Meetings instead. The Executive Committee will be working to develop a long-term strategy which might be more successful in retaining current members while somehow attracting new members into the fold, as well.

C.H.D.

TOM ROBBINS will be presenting a discussion on "Compiling Super Basic on the QL" at the CATS general meeting.

He will address the fundamental question: "Why would anyone want to compile Super Basic programs, anyway??"

Among myriad answers, he will include the following:

- Multi-tasking becomes a reality.
- Commercial packages such as Abacus can be enhanced.
- Procedures can be developed and turned into resident procedures.
- Speed can be enhanced.

Anyone who has Super Basic programs they would like to turn into compiled executable ("EX") programs should bring them to the meeting.

If they bring a QL along also, they can be linked into the QL network Tom will have going on site and compile their programs forthwith on their own equipment.

FEBRUARY MEETING AGENDA

- 11:00 Hardware Workshop
1:00 Executive Committee
(In the "Cloakroom")
Mark Fisher, presiding
2:00 General Meeting
(Large Meeting Room)
Mark Fisher, presiding
2:30 "Compiling Super Basic"
presented by Tom
Robbins
4:30 Adjourn

Please Remember

Members are requested to utilize on-street parking or the Brent School lot (immediately behind the library lot). Library patrons need the library lot.

KEY DATES

FEBRUARY

- 11 General Meeting
14 VALENTINE'S DAY
23 MARCH Newsletter
DEADLINE

MARCH

- 10 General Meeting

from the editor...

2068 troops take note! It's Income Tax time again and time to slave away trying to figure out how much the government wants you to keep. But wait, who is that on the horizon? It is the Lone Sinclairist (Barry Washington) riding to our aid with a trusty tax program in his saddlebags.

My new toy

Well, I finally did it! I now am the proud owner of a Hewlett-Packard LaserJet IIP. It is really a work of art and it looks as if H-P is going to give Big Blue a whipping in the personal laser printer wars. If all goes right, I'll be able to print this month's issue on the laser which ought to make the copy a lot more readable.

BBS goes big time

Have you tried the bulletin board lately? If you haven't you will be surprised when you check in. 1200 baud is no longer a pipe dream, it's real. I'd like to offer Mark Fisher a big round of applause for his efforts at upgrading the BBS. If you have been following Mark's articles over the last few months, you will realize that it has been quite a job.

Another DTP program?

I hope you will bear with me for the next couple of months as I switch over the composition of the newsletter from the Atari to the Atari based Mac emulator, the Spectre GCR. I will be trying to learn yet another DTP program, this time a beautiful little jewel for the Mac called Ready, Set, Go. I am also experimenting with PostScript, which ought to result in a very crisp looking product.

What's inside

As I indicated above, this issue has Barry Washington's 2068 Income Tax program. Hank Dickson introduces Tom Robbins' February program on Compiling Super Basic on the QL and also recaps the January BBS auction. Sheldon Gilbert give some excellent pointers on using Quill. Mark Fisher

keeps us abreast of the latest developments on the Bulletin Board. Finally, I hope you will look at the Classified Ads. Richard Roseen has some excellent deals in QL hardware, software, and books. This is your chance to upgrade/complete your system.

A word of thanks

I'd like to add my thanks to all of you who participated in the BBS auction. To raise about \$200 in a single afternoon, without selling a single cake or washing a car, is a true feat. Auctioneer MarkFisher and donors John Conger and Tom Bent were the right combination to make our 1200 baud BBS a reality. Next stop, Mark, 2400?

I hope you enjoy the issue.

Happy Valentine's Day

Submissions to the newsletter should conform to the following criteria:

Column width no greater than 2 3/8". QL users should submit their articles on a microdrive cartridge or floppy disk. TS 1000 and 2068 based articles should be hard copy. All authors should consider sending their articles to the newsletter via the CATS BBS, (301) 588-0579.

Our mailing address is:

CATS
P.O. Box 467
Fairfax Station, VA 22039

DUES SLASHED!!

In January, the Executive Committee agreed to present to the membership a proposal by Acting President C.H. (Hank) Dickson that current dues be lowered.

At the General Meeting, the membership discussed the proposal thoroughly.

The final decision was to reduce annual dues for the next twelve months from \$18 to \$15. Newsletter subscriptions would continue to be \$12 annually.

The main purpose of the reduction was to stop penalizing current members for a dues structure which historically has been too high.

Treasurer Barry Washington cautioned that based on his experience the past six months, income has not been keeping up with expenditures.

The participants in the discussion agreed that, to keep a high level of solvency, occasional new members plus an improved level of renewals will be needed. The new dues structure will hopefully encourage both.

Those who may have already renewed in December (an usually heavy month) or before January 13, 1990 at the \$18 rate will have their anniversary date extended two months (1/6 of a year) as a matter of equity.

Auction Benefits CATS and its BBS

Total serendipity descended unannounced over the CATS community at its January meeting.

JOHN CONGER, former CATS president, is moving on to greater things. He therefore brought his large collection of Sinclair items to the New Carrollton Branch Library to donate to the club.

MARK FISHER, also a former president, asked the Executive Committee if he could auction the items off, with the proceeds going to a \$50 software item he needs for the BBS on the Kaypro 10.

The answer was an enthusiastic "yes".

A large part of the business meeting was absorbed by the auction. Items that went under the auctioneer's gavel included books, documents, TS 1000's, TS 1500's, TS 2068's, printers, modems, memory packs, power supplies---the whole array. TOM BENT also contributed a working QL and an exotic interface device to the activities.

Even with the bargain-basement prices bid by the members lucky enough to be there, the proceeds to CATS were well over \$200.

So the BBS will indeed get the piece of software, thanks to the generosity of John Conger and the group's bottomless pockets.

John Conger always stressed the importance of regularly taking a hard look at the future and then making hard plans based on the best knowledge available.

BBS Update

The trials and tribulations of a Sysop-A continuing sagal

Well, the date setting routine seemed to be OK. so I've moved on to the assembly of PBBS itself (largely automated, cookbook work). Something must be wrong - it reports 2710 fatal errors! (I LOVE assemblers!)

Ah-HAH! The assembler thought it was supposed to see 8080 mnemonics, but I forgot to tell it it was going to get Z80 fodder.I love these things...

AHA #2! My antique version of M80 (CP/M Z80 assembler) can't handle labels more than six char. long! (I'm down to six fatal errors - better than the seven deadly sins!)

STOP THE PRESS! STOP THE PRESS! BBS HITS THE TWISTED PAIR!

By the time you read this, the CATS BBS will have "gone 1200", with a Kaypro 10-Megabyte hard disk. Since the K-10 is "portable", I'll be able to bring it to the next club meeting, so that members can try it out.

We will continue to support the 300 BAUD MODEMS that were made for the Timex machines, but this development means that QL's don't need to invest in a MODAPTOR to contact us. The system will automatically adapt to YOUR transmission speed, and there is a user area devoted to YOUR machine, just waiting for uploads. Uploads. Ah, yes. In the 1000 and the 2068, BASIC programs are stored as TOKENS, with a single byte standing for the entire phrase "GO TO", for instance. We have published a BASIC program to upload programs as ASCII

As I See It by Vernon Smith

The opinions expressed are the solely the author's and do not represent the position of CATS or its Executive Board.

David Hartman--Where are you?

Some of you may have seen the BBS messages from DavidHartman, and my replies to him, on Time Designs. Rather than try to recap them I will print them in their entirety.

12-2-89

To: ALL

From: DAVID HARTMAN

Re: TIME DESIGNS MAG

IF ANYONE IS INTERESTED, I HAVE INVOLVED THE JUSTICE DEPARTMENT IN AN INVESTIGATION OF TDM.

12-2-89

To: David Hartman

From: Vernon Smith

Re: TDM investigation

Why? Sound(s) like a normal business failure to me and certainly not the first time a Timex computer mag has gone down the dumper. What makes TDM so special that you want to waste the scarce resources of the Justice Dept (and my tax dollars)? I'll be the first to admit that I've dumped on Tim Wood(s) before, and I may in the future but.....a Justice investigation????

1-19-90

To: ALL

From: DAVID HARTMAN

Re: TDM REFUNDS

I HAVE BEEN SUCCESSFUL IN A REFUND OF UNDELIVERED TDM. WRITE TO MS. BECKY DAVIS, ENFORCEMENT OFFICER, FINANCIAL FRAUD SECTION, DEPARTMENT OF JUSTICE, JUSTICE BUILDING, SALEM, OREGON 97310. MENTION MY NAME, DAVID HARTMAN, AND THIS REFERENCE NUMBER: 400-6490-89. RESULTS OCCUR....I RECEIVED A REFUND AND THE ISSUES I NEVER GOT....ITS A HELL OF A WAY TO GET THINGS DONE, BUT IT DOES WORK...AND IT WILL WORK FOR

YOU TOO IF THE DOOR TO TDM IS CLOSED.

1-19-90

To: David Hartman

From: Vernon Smith

Re: TDM

Be advised that TDM recently has printed Vol 5, No. 2. Several months ago when you first put your original message on the BBS about TDM, I asked why you were going after Tim Woods with such a vengeance. You never replied. Can I assume that by your silence you really don't have a reason? I shall assume that you NOW don't wish to see TDM ever resume publishing in any regular fashion since most of Tim's time (and possibly YOUR money) will be spent trying to fight the petty bureaucrats that you have unleashed on him. It really doesn't matter that he hasn't taken your money fraudulently--proving the obvious will take a lot of time and effort. TDM is a second job for Tim and he has had some personal problems which required his attention. Perhaps he is guilty of not keeping the Sinclair community advised of the status/reasons for delay, but to institute legal action for less than \$20....REALLY! I hope that you will reply for I am really curious as to your motivation for this. Additionally, I would hope that you never have any personal problems of your own.

Over the last year or so I've dinged Tim myself; however, each time it was intended to goad him into letting the subscribers know what was happening and/or formulating a realistic plan to get the magazine out or close up shop. I'm sorry if I seem to be some sort of fatalist on this matter, but, when you own an orphan machine, the demise of computer mags seems to be built into the landscape. I've lost money when FD-86 N/L sent only 1 of the 4 issues for which I'd paid. I have a cancelled check \$40 for a Canadian Atari magazine that folded before they sent my first issue. So I've been ripped off, but the victim of

fraud? Maybe so, probably not. As a rule these publications are sidelines, rather than the primary sources of income, therefore their existence is tenuous at best. A host of problems can prevent the editor from getting an issue out. These operations usually are thinly capitalized and are started because the founder has an interest in the computer and not necessarily because he has good business sense. With a subscriber base that is either dwindling or does not get enough initial subscribers, the founder valiantly tries to go ahead anyway. A businessman would close up shop and return the subscription money, but these folks aren't in it for the money. They want to get the info to you. So they get in over their heads and just quietly go under. Is this fraud? I think not. In the light of some of the real frauds the Sinclair community has experienced, Quantum Computing and Foundation Systems (which got me for \$300), even if it were fraud it would be small potatoes. Do I think somebody ought to be able to start a publication, take subscription money, then fold it without returning the money. Certainly not. I just think everything ought to be put in perspective. End of Bus Ad 101 lecture.

To David Harman I wish good health and prosperity. Why? Because, if the venal attitude he displayed toward Tim Wood(s) is indicative of his treatment of others, when he has problems everyone is going to sit on the shore and laugh while he drowns.

Uncle Clive's new kid
Sinclairland never ceases to amaze me. Clive Sinclair's eternal toil in the miniturization vineyards continues like some Greek myth. The HATS newsletter reports that Cambridge Computers (read Uncle Clive) is set to bring out the smallest laptop on the market. Using a MS-DOS operating system, it will have 3 1/2" drives and weigh 3 1/2 pounds. A 20/40 MB hard disk will be optional. Look for it sometime next year. That is the rub, as far as I can see. Clive brings out some great

Please turn to page 10

QUELLING CRAZY QUILL

by Sheldon S. Gilbert

Nobody says Quill is the world's greatest word processing program, but it does come with the QL and it is almost a WYSIWYG program. It can drive you crazy if you try to do anything much more than produce a simple letter and even there it requires a special technique (changing the indent margin to match the left margin for block format or stopping and resetting the indent margin after the salutation for indented paragraph format.)

Pagination In Headers and Footers

If you are writing a long manuscript, such as a book, a peculiar thing happens when you reach page 208. Neither the header nor footer will print if you designate a page for the printer to start in the printer command. That is, the header and footer will print in their proper places if you press "F3, P, enter, enter, enter" but if you press "F3, P, enter, 208, enter, enter, enter" the text will print but neither the header nor the footer will print out. This will happen even if the manuscript is only one page. If you must start printing at a designated page number either break the manuscript up so that the desired starting page is the first page of the document, enter that page number as the "Start page" of the Design menu and press "F3,P, enter, enter, enter", or assign a lower number page in the design menu and include the desired hundreds digit as part of the text of the header or footer. Example: To have the header and footer print "page 210". Set Start Page on the design menu to 10. Set the header and the footer to read "page 2nnn." Now either "F3, P, enter, enter, enter" or "F3, P, enter, 10 (or 11 or whatever), enter, enter, enter" will work. When you reach page 255 you will have no choice. Neither the header nor the footer will paginate above page 254. If you want page 255 or above to be printed in a header or footer you must use the technique given in the example no matter what instructions you give to the print command.

Special Format Using Double and Single Spacing

Many publications expect the first page of an article, story or book to have information such as the author's name, address, telephone number and social security number single spaced in the upper left hand corner of the first page. Other information such as the number of words and legal rights offered for sale goes in the upper right hand corner. The title of the piece starts about half-way down the page and everything after that is double spaced. A header with the name of the author and the page number appears on the second page and on all following pages. It takes a couple of steps to set up Quill to do this. First, put the first page on the screen as you would want it to appear on paper. Second, hit "F3" then "O" (not zero) and then "P". This brings up the forced page break menu. Set the cursor on the last line of the title and hit "P" again. Then "Enter" to escape from the Page menu. Make a note of the line number. Third, turn off the footer (or if your printer configuration is like mine and prints an extra letter when set on "none" and you haven't got around to reconfiguring, set Footer at "Centre", push "Enter" and then erase everything so the line is blank. Then set the footer margin to "0".) Fourth, Press "F3" and then "D" to access the Design Menu. Set "Gap" to "0" (zero) and "Start page" at "0". Count the number of lines in the Upper Margin (I use 2 or less), add them to the cursor line number you just noted and set the "Page length" to the result. Fifth, Press "F3" and "P" for Print. When "whole" appears in the print instruction line press "O" and when "to end" appears press "O" again and enter. The printer should print the information at the top of the page, move down to the middle of the page, then stop after printing the title. Sixth, if the document is to be only one page go back to the Design menu ("F3" then "D"), set "Gap" to "1", "Start Page" to "1", "Upper Margin" to "0" and make "Page length" long enough to finish the page (I set mine at 60). Print with "whole" in the printer command changed to "1". If there is more than one page the procedure is only a little more complicated. The first five steps are

exactly the same. The only settings that need be changed in the sixth step are the "Gap" to "1", the "Upper Margin" to "0", and the "Page Length." For the second page and following pages, reset the header to the left and provide a desired header message and header margin. Return to the design menu and insert the "Upper Margin" that you desire. Go back to the text and force a page break at the end of the last line that has been printed on page 1. Change "whole" in the print command to "2". An alternative to the procedure given for a multi-page document is to print the title and text first and then go back, put the paper back into the printer or rewind the platten and insert the special single spaced info at the top of the first page.

It may be useful to keep a record of the various settings that you use in the design menu. I find it useful to hide these in either the unused footer line or in the header line, taking them out before the header (which for me is always the same "Gilbert-nnn") is activated. Thus, if the document need be retyped in the future all the information is ready and waiting.

F4 and the TYPEFACE FUNCTION

The use of the "F4" typeface function can be daunting. Using "Shift F4" to toggle between "Overwrite" and "Insert" modes is easy enough and simple underlining by using "F4" followed by "U" normally doesn't present too much of a problem. Difficulties sometimes arise when using the "Paint", "Bold", "High" and "Low" typeface modes. You suddenly find yourself in a mode and don't know how to get out. No problem. To get out of one of the typeface modes simply repeat what you did to get into it. So if you are in high type made simply press "F4" and "H" and you will be back to normal. This applies to any of the "F4" procedures. (The HELP information is pretty clear on this, but who remembers to look at HELP?) With this in mind, a sentence such as, "Water or wasser, H2O, is essential to human life.26" becomes a piece of cake. The tricky thing is that Quill will put you in the

things but his market timing is lousy. With all of the laptops on the market--and some pretty powerful ones at that--the user base may not be there unless it is priced way below what the present ones are selling for. Then it is a function of keeping the costs down so that the sales price yields enough profit. From what I hear, Clive will need it as Cambridge, at least the North American operations, have filed for bankruptcy under Chapter 11. Stay tuned.

Exit HATS

I'd like to say goodbye to an old friend. HATS, the Harrisburg Area Timex Sinclair Users Group is disbanding and another newsletter is biting the dust. Their inputs to the Sinclair scene will not be lost, however, as Dave Bennett and Ed Kapp attend our meetings regularly.

Quantum Levels/Syncware News bows out

Also wrapping up operations is Quantum Levels which was recently combined with Syncware News. While most Sinclair magazines which folded usually sold their subscriber list to another magazine, QL/SN will not. Instead of getting another magazine which you may or may not want, they will (get this) REFUND your unused subscription money in the form of a check or by sending back issues of the two publications. Those of you that have money coming could really get a good deal by scarfing up the back issues. There is a treasure trove of information that is only available in them.

Enter (again) Time Designs

Rising like a Phoenix from the ashes is Time Designs magazine. Just when you thought he was down and out, Tim Woods puts out another issue. I just received Volume 5, Number 2, along with a Christmas card from Tim. Time Designs is smaller, now 7" by 8 1/2", but Tim maintains that it has more news. Welcome back and we can't wait for issue number 3.

What's going on with SNUG?

When we last looked in on SNUG at the CapitalFest last May, they were trying to get organized and not doing an especially good job. Mel Nathenson has had to curtail his SNUG activities. Frank Davis from Indianapolis is running the Public Domain library. There's been activity in Frank's area but little else. Last year I commented on SNUG and I think events have pretty much borne me out. I felt then, and I still do, that many of their goals preempt those of the local users groups. Perhaps SNUG should take another look at their charter and make it more focused, rather than trying to be "something for everyone".

Rumors

Heard any good rumors lately? Pass them on to me and I'll put them in the N/L.

BBS Report: Into the Depths of CP/M

by Mark Fisher

Well, I probably set my sights too high. I probably should have hacked the BASIC BBS I got from Phoenix Pete until I liked it. But I really couldn't figure out how to chain it to BYE without compiling it (in retrospect, of course, I've spent even more time preparing BYE for PBBS). Thus, the last month has been spent sinking ever deeper into the arcane and long obsolete world of 8080 Assemblers, in my quest to find a way to fool PBBS into thinking there's a clock attached.

First of all, I should report on the John Conger Memorial BBS Benefit Auction (shhh! don't tell the library where we meet!). It went wonderfully, with spirited bidding, and good humor from the "losers". Not the least of the attraction was due to Tom Bent's contribution of a QL and a T/S 1000 printer/ 'stringy floppy' / serial i/f board. John is moving south, to be near his two sons in Georgia, and CATS was lucky enough to get his unneeded

To be concluded next month
